Date and Time: It is used to display the current date and time.

What are the advantages of Computerised accounting.

a. Speed
b. Accuracy
c. Reliability
d. Up-to-Date Information
e. Real Time User Interface
f. Automated Document Production
g. Scalability
h. Legibility

What are the various reports available in tally? Explain how they are displayed.

1)Outstanding report: Outstanding report in Tally.ERP 9, shows user the receivables which are pending with customers. The user can check the report ledger-wise as well as bill-wise. The user can see the ageing analysis on the basis of the due date on the bills. The ageing analysis helps the user to take timely follow-ups for the payment and can clear his outstanding receivables as soon as possible.

To check outstanding report in Tally, ***go to Gateway of Tally -> Display -> Statement of Accounts -> Outstanding -> Ledger***

2)Profit and Loss report: The Profit and loss report shows all the incomes as well as the expenses for a particular time period. It displays whether the expenses are exceeding the incomes causing a loss or the income is exceeding the expense causing a profit. Profit and loss report is also available in Tally.

To check Profit & Loss report ***go to Gateway of Tally -> Profit and Loss.***

3)Cash flow/ Fund flow report: Cash flow statement is a report that shows the inward and outward flow of cash in the organization. It shows how the cash is spent and from where it is earned. Tally has this made for you. You do not have to spend time creating this report.

To check the Cash flow report: ***Go to Gateway of Tally -> Display -> Cash/Funds Flow -> Cash Flow***

Ratio Analysis report:-Ratio Analysis report is another performance based report that provides insights regarding the financial health of the business. Tally provides a ratio analysis report that can be viewed from

Gateway of Tally -> Ratio Analysis.

4)Balance Sheet:A balance sheet shows the assets and liabilities of the company. It helps to understand the performance of the business. Tally.ERP 9 shows the balance sheet of the company.

To check Balance Sheet ***Gateway of Tally -> Display -> Final Accounts -> Balance Sheet***

5)Stock summary report: The stock summary report in Tally.ERP 9 provides a summary of the stock/inventory available on a specified date. It shows the current availability of stock. This helps you to check the available stock before hand and then plan accordingly. The quantity of stock can be kept in level with the demand so as to avoid overstocking of inventory. This report also helps to avoid wastage of inventory.

To check stock summary, ***Go to Gateway of Tally -> Stock Summary***

gateway of Tally > F11: Features > F1: Accounting Features

1. Integrate Accounts and Inventory-This option has a significant effect on the Balance Sheet and Profit & Loss Account. If set to **Yes**, it extracts the stock/inventory balance figures from the inventory records and provides a drill down to the Stock registers from the Balance Sheet.

2. Income/Expense Statement Instead of P & L-By Default, this option is set to **No**.

If set to **Yes** – Tally.ERP 9 displays Income & Expenses A/c instead of Profit & Loss A/c in the Gateway of Tally.ERP 9 Menu. Income and Expenditure statement generally used for Non-Trading accounts and Profit & Loss a/c are used for trading accounts.

3. Allow Multi-Currency-By Default, this option is **No**.

Set this option to **Yes**, if you want to create multiple currencies and the Menu Currencies is displayed in **Gateway of Tally > Accounts Info. menu**.

Outstanding Management

4. Maintain Bill wise Details-The Bill-wise facility is made functional by setting this option to **Yes**. By activating the Bill wise feature, the ledger masters under Sundry Debtors and Sundry Creditors automatically displays an additional option called Maintain balances bill-by-bill. On setting this option to **Yes**, an additional option Default Credit Period is displayed.

5. Activate Interest calculation-Set this option to **Yes** to enable Tally.ERP 9 to calculate interest automatically based on the interest rate and style of calculation specified. Enabling this option allows interest calculation on outstanding balances for any ledger account or on each invoice for the period it is outstanding completely or partly.

6. Use advanced parameters-The advanced parameters are useful when interest rates change from time to time. Set this option to **Yes** to enable this function.

Cost/Profit Centers Management-7. Maintain Payroll-Set this option to **Yes** if you want to maintain Payroll information on Tally.ERP 9 for the selected company .

8. Maintain Cost Centers-A Cost Centre can be defined as a unit of an organization to which transactions can be posted. When only costs or expenses are allocated to these units, they are referred to as Cost Centers. The Cost Centre feature is activated by setting this option to **Yes**.

9. Use Cost Center for Job Costing-Set this option to **Yes** to track all income and expenses for a **Job/Project**.

10. More than ONE Payroll/Cost category-Set this option to **Yes** to create more than one Payroll or Cost Category.

11. Use Pre-defined Cost Centre Allocations during Entry=Set this option to **Yes** to define Cost Centre Allocations. Refer Cost Centers and Cost Categories for details.

12. Show Opening Balance for Revenue Items in Reports-Set this option to **Yes** to display the opening balance in **Cost Centre Report** for the cost centers which are allocated to the Ledgers, grouped under **Income and Expenses** Group.

Invoicing

13. Allow Invoicing-Set this option to **Yes**, to create Sales and Purchase vouchers in the invoice format. The advantage of using the invoice format for sales invoice entry is that it enables automatic calculations of Duties and Taxes accounts.

14. Enter Purchases in Invoice Format-Set this option to **Yes**, to enable voucher class option in purchase voucher type.

15. Use Debit/Credit Notes-The Debit Note and Credit Note voucher types are made available only if this feature is set to **Yes**.

16. Use Invoice Mode for Credit Notes-Set this option to **Yes** to create Credit Notes in Invoice Mode.

Explain different accounting vouchers in tally

ypes of Accounting Vouchers in Tally

Payment voucher: Payment voucher in accounting vouchers in tally records all business transactions related to Payment. Any payment made by the company through cash, cheque, online payment or any other mode comes under this voucher type. To record transactions, click **Gateway of tally> Transaction> Vouchers> Press F5.**

Receipt Voucher: The Receipt voucher under accounting vouchers in tally records all money transactions received by the company. The amount received could be in the form of cash, cheque or online. When an accountant makes a receipt voucher in Tally Prime, all the invoice with pending payments pop up as a reminder. To record this transaction, go to **Gateway of tally> Transaction> Vouchers>** Press F6.

Contra Voucher: In contra voucher, all the company's transactions include deposits or money withdrawal from its bank account. The entry is made in this voucher if the amount is transferred from bank to bank or cash to cash. To record such transactions, go to **Gateway of tally> Transaction> Vouchers>** Press F4.

Purchase Voucher: In this voucher, all the transaction related to company purchases is recorded. The purchase can be made in cash or borrowed or in the form of goods and services. To record the transaction, go to **Gateway of tally> Transaction> Vouchers>** Press F9.

Sales Voucher: It is one of the most used accounting vouchers in tally. Accountants can create two different formats, such as invoice and voucher in this type. Sales voucher records all sales transactions of the company in credit or cash. In vouchers, one can store transactional records electronically and print them for customers. To record this transaction, go to **Gateway of tally> Transaction> Vouchers>** Press F8

Journal: In Tally's inventory and accounting vouchers, users can use it as an optional voucher in Tally to make sales and purchases. An accountant can also use it to adjust or transfer stock from one warehouse to the other and for tax

Write notes on a)Axis title b) Chart Title c)Legend D)Grid Lines E)Data labels

1) **An axis title** is a word or phrase that describes an entire axis. Titles generally define what kind of data is being shown on that axis. The text of axis titles always displays horizontally, even for vertical (Y) axes.

2) T**he ChartTitle** is a content control placed at the top of each chart control. It is used to display any title information regarding the visualized chart.

3)The legend of a graph reflects the data displayed in the graph's Y-axis, also called the graph series. This is the data that comes from the columns of the corresponding grid report, and usually represents metrics. A graph legend generally appears as a box to the right or left of your graph.

4) **Gridlines** in Excel[1] are the horizontal and vertical gray lines that differentiate between cells in a worksheet. The gridlines guide users to differentiate between the specific cells and read the data in an organized manner. They also help users navigate through the worksheet columns and rows with ease

5) **Data labels-**are used to display source data in a chart directly. They normally come from the source data, but they can include other values as well, as we'll see in in a moment. Generally, the easiest way to show data labels to use the chart elements menu
